1. Project Overview

The project is a tarot reading website, where users can experience an online version of selecting a random card from a spread of tarot cards. Users who wants to test their knowledge of tarot cards can also experience flash card mode.

2. User Stories

- As a fan of tarot reading who goes to tarot reading shops to get readings, I would like an alternative way to draw a random tarot cards for a quick reading instead of having to visit a shop every time.
- As someone who wants to learn how to do tarot readings, I would like a flash card of tarot cards to learn to match the image to the meanings.

3. Application Features

- When a user selects a deck and a mode of reading, the app will generate a random spread of cards from which the user can select a random tarot card that is face down. Proceeding to reveal the card will show the card and the associated meaning.
- When a user selects flash card mode, the app will show an image of the card that is randomly generated. Clicking on the image will reveal the card meaning.

4. FRAMEWORKS, APIs, and DATA

Tarot Card APIs
